# Multi Attribute Decision Making In Optimization of Corrugated Sheet Box Industry

Prof.S.R.Jachak<sup>1</sup>, Miss. Aditi Taley<sup>2</sup>

<sup>1</sup>Assistant Professor, <sup>2</sup>M.Tech Student Department of Mechanical Engineering, Yeshwantrao Chavan College of Engineering, Nagpur, India

Abstract – The aim of this research work paper is an optimization of corrugated sheet box industries by using 15 common attributes from three different industries by using MADM methods like AHP, TOPSIS Å **PROMETHREE** so that we can find out best alternative. Systematic decision-making analysis can help decision maker to summarize and judge all information effectively and to define right question and to find out optimum and the most appropriate solution. Analytic hierarchy process(AHP) is a structured technique for organizing and analyzing the complex decisions. TOPSIS is also one of the MADM method, in this technique two artificial alternatives are hypothesized. Positive ideal alternative which corresponds to the maximum value and negative ideal alternative which corresponds to the minimum value. PROMETHREE offers complete ranking from the best alternative to the worst one. In this method pair of alternative is compared.

From this investigation, it is found that ,these technique like AHP and PROMETHREE will not only help the researcher in providing the matter concerned but also helps to understand the optimization problem in better way with possible solution.

**Keywords-** Multi Attribute decision Making, Analytic Hierarchy Process (AHP)

# INTRODUCTION

Multi-attribute decision making method, which was taking as the base for the decision making model, is one of the decision-making support methods. The MADM

theory offers a formal base for the establishment of a model, in which the key criteria is interconnectedness of assessments according to the individual parameters that result in an integrated assessment.

Engineers are always making design decisions, whether it's the design of a thermal fin or the location of a new manufacturing plant. Poor decisions could result in the loss of money, resources, and time. Therefore, it is important that engineers make logical and well reasoned decisions. Systematic decision-making analysis can help decision maker to summarize and judge all information effectively and to define right question and to find out optimum and the most appropriate solution.

Analytic hierarchy process (AHP) is a structured technique for organizing and analyzing the complex decisions. TOPSIS is also one of the MADM methods, in this technique two artificial alternatives are hypothesized. Positive ideal alternative which corresponds to the maximum value and negative ideal alternative which corresponds to the minimum value. PROMETHREE offers complete ranking from the best alternative to the worst one. In this method pair of alternative is compared.

From this investigation, it is found that ,these technique like AHP and PROMETHREE will not only help the researcher in providing the matter concerned but also helps to understand the optimization problem in better way with possible solution. The purpose for using utility theory in decision making is to create a mathematical model to aid the process. It gives the decision maker the ability to quantify the desirability of certain alternatives. Utility theory is for design scenarios where uncertainty and risk are considered. The end result of using this method is a function which represents the designer's preferences, given a certain set of design attributes.

### INDUSTRIAL SURVEY

### Name of Industries are given below:

- 1] Sunpack Industries Private Ltd, N-45,MIDC, Amravati
- 2] Shrinath Packers Pvt. Ltd, C- 40, MIDC Badnera Road, Amravati
- 3] Mahalakxmi packers Private Ltd , MIDC , Amravati

# International Journal of Innovations in Engineering and Science, Vol. 1, No.3, 2016

Fig 1-Packing Boxes

# CORRUGATED SHEET BOX PRODUCTION PROCESS

There are mainly six workstation

- 1] Corrugation
- 2] Pasting
- 3] Printing
- 4] Creasing.
- 5] Slotting
- 6] Stitching & Punching

Fig2- Corrugation Process

It has 3 rolls & 1hp motor & gum pot. Rotate with high speed about 1000 rpm .then the gum is sticking with a roll. It carries 3 rolls & 1hp motor & gum pot

# **Technical Data:-**

Size Motor Weight Aprox Floor Space (Inches) (H.P) (Kilo Gram) 55 1/2 500 6'\*3' 65 1/2 600 7'\*3' 75 1/2 700 8'\*3' 85 1/2 800 9'\*3'

A precision grinded roll, the glue is applied to the tips of the corrugated surface of the sheet. The pressure on sheet & control of gum is adjustable from single side. All gears and v belts are covered for safety.

### METHOLOGY

### Multi Attribute Decision Making (MADM)

MADM methods, on the other hand, are generally discrete, with a limited number of predetermined alternatives. MADM is an approach employed to solve problems involving selection from among a finite number of alternatives. An MADM method specifies how attribute information is to be processed in order to arrive at a choice. MADM methods require both interand intra-attribute comparisons, and involve appropriate explicit takeoffs.

### PARTS OF MADM METHOD

Each decision table (also called decision matrix) in MADM methods has four main parts, namely:

- (a) Alternatives,
- (b) Attributes,
- (c) Weight or relative importance of each attribute
- (d) Measures of performance of alternatives with respect to the attributes.

Given the decision table information and a decisionmaking method, the task of the decision maker is to find the best alternative and/or to rank the entire set of alternatives. It may be added here that all the elements in the decision table must be normalized to the same units, so that all possible attributes in the decision problem can be considered.

### **Decision table in MADM methods**

|                   |  | Attrib   | utes   |  |   |
|-------------------|--|--|--|--|---|
| B <sub>1</sub>    | $B_2$  | $B_3$  | -  | •  | $B_M$   |
| (w <sub>1</sub> ) | (w <sub>2</sub> )  | (W3)   | (-)  | (-)  | $(W_M)$   |
| m <sub>11</sub>   | m <sub>12</sub>  | m <sub>13</sub>  | -  | -  | m <sub>1M</sub>                                       |
| $m_{21}$          | $m_{22}$   | $m_{23}$   | -  | •  | $m_{2M}$  |
| $m_{31}$          | $m_{32}$   | m33  | -  | •  | $m_{3M}$  |
| -                 | •  | •  | -  | -  | •   |
| -                 | -  | -  | -  | -  | •   |
| m <sub>N1</sub>   | $m_{N2}$   | m <sub>N3</sub>  | -  | -  | m <sub>NM</sub>                                       |
|                   | $\begin{array}{c} B_1 \\ (w_1) \\ \hline m_{11} \\ m_{21} \\ m_{31} \\ - \\ m_{N1} \\ \end{array}$ | $\begin{array}{cccc} B_1 & B_2 \\ (w_1) & (w_2) \end{array} \\ \\ \hline m_{11} & m_{12} \\ m_{21} & m_{22} \\ m_{31} & m_{32} \\ \\ \hline & & & \\ $ | $\begin{array}{cccccccccccccccccccccccccccccccccccc$ | $\begin{array}{c ccccc} & Attributes \\ B_1 & B_2 & B_3 & - \\ (w_1) & (w_2) & (w_3) & (\cdot) \\ \hline \\ \hline \\ m_{11} & m_{12} & m_{13} & - \\ m_{21} & m_{22} & m_{23} & - \\ m_{31} & m_{32} & m_{33} & - \\ - & - & - & - \\ m_{N1} & m_{N2} & m_{N3} & - \\ \hline \end{array}$ | $\begin{array}{c ccccccccccccccccccccccccccccccccccc$ |

The decision table shows

Alternatives, Ai (for  $i = 1, 2, \dots, N$ ),

Attributes, Bj (for j = 1, 2, ..., M),

Weights of attributes, wj (for j=1, 2, ...., M) and

The measures of performance of alternatives, mij (for i= 1, 2... N; j=1, 2... M).

# SELECTION OF AN ATTRIBUTE

| Sr. | Attributes        | Industry    | Industry    | Industry    |
|-----|-------------------|-------------|-------------|-------------|
| No. |                   | 1           | 2           | 3           |
| 1   | Production        | 60 tonne    | 40 tonne    | 50 tonne    |
|     | capacity/month    |             |             |             |
| 2   | Material          | 63 tonne    | 42 tonne    | 52 tonne    |
|     | requirement       |             |             |             |

### Table:- 1 shows attributes and their alternatives

### **APPLIED METHODS**

- 1] Analytic Hierarchy Process (AHP)
- 2] Technique for Order Preference by Similarity to Ideal Solution (TOPSIS) Method
- 3] Preference Ranking Organization Method for Enrichment And Evaluation (PROMETHEE)

## CALCULATIONS

Table:- 2 Information regarding the Attribute is as follows

| Preference scale                | Numerical<br>value |
|---------------------------------|--------------------|
| Very strong                     | 1                  |
| Strong importance               | 2                  |
| Absolute strong                 | 3                  |
| Between strong &very strong     | 4                  |
| Between strong &absolute strong | 5                  |

### Table:-3 Relative Importance is as follows

| Sr. | Attributes                  | Preference |
|-----|-----------------------------|------------|
| No. |                             | scale      |
| 1   | Production capacity/month   | 1          |
| 2   | Material requirement        | 2          |
| 3   | Number of machines          | 5          |
| 4   | Cycle time/day              | 3          |
| 5   | Manpower requirement        | 0.5        |
| 6   | Production / year           | 1          |
| 7   | Types of sheet              | 5          |
| 8   | capital investment          | 2          |
| 9   | Area of Industries          | 0.5        |
| 10  | Transportation cost         | 0.5        |
| 11  | Container capacity          | 3          |
| 12  | Wages & salaries            | 4          |
| 13  | Wastage (In terms of paper) | 2          |
| 14  | Net profit                  | 1          |
| 15  | Power consumption           | 4          |

### CALCULATIONS FOR AHP METHOD

Table 4- Pair Wise Comparison Matrix

| Industry | Consistency Index | Score |
|----------|-------------------|-------|
| 1        | 3.413-2/3         | o.471 |
| 2        | 4.306-2/3         | 0.768 |
| 3        | 4.786-2/3         | 0.928 |

Table 5- Weights of Attributes

| Sr.<br>No | Row sum | Row sum*1/15 | Weights |
|-----------|---------|--------------|---------|
| 110.      |         |              |         |
| 1         | 34.5    | 2.3          | 0.083   |
| 2         | 17.25   | 1.15         | 0.041   |
| 3         | 6.9     | 0.46         | 0.016   |
| 4         | 10.45   | 0.696        | 0.027   |
| 5         | 69      | 4.6          | 0.165   |
| 6         | 34.5    | 2.3          | 0.082   |
| 7         | 6.9     | 0.46         | 0.016   |
| 8         | 17.25   | 1.15         | 0.041   |
| 9         | 69      | 4.5          | 0.165   |
| 10        | 69      | 4.5          | 0.165   |
| 11        | 10.45   | 0.696        | 0.027   |
| 12        | 8.625   | 0.575        | 0.020   |

Table 7- Decision Matrix Table

| Sr. | Attributes         | Industry 1        | Industry 2  | Industry 3  |
|-----|--------------------|-------------------|-------------|-------------|
| No. |                    |                   |             |             |
| 1   | Production         | 60 tonne          | 40 tonne    | 50 tonne    |
|     | capacity/month     |                   |             |             |
| 2   | Material           | 63 tonne          | 42 tonne    | 52 tonne    |
|     | requirement        |                   |             |             |
| 3   | Number of          | 6                 | 6           | 6           |
|     | Machines           |                   |             |             |
| 4   | Cycle time/day     | 10 hrs            | 12 hrs      | 10 hrs      |
| 5   | Manpower           | 15                | 12          | 12          |
|     | requirement        |                   |             |             |
| 6   | Production / year  | 720 tonne         | 480 tonne   | 600 tonne   |
| 7   | Types of sheet     | 3                 | 1           | 2           |
| 8   | Capital            | 39.48 <u>lakh</u> | 16.64 lakh  | 21.28 lakh  |
|     | investment         |                   |             |             |
| 9   | Area of Industry   | 11000 sq.ft       | 10000 sq.ft | 10000 sq.ft |
| 10  | Transportation     | 60000 rs          | 40000 rs    | 50000 rs    |
|     | cost               |                   |             |             |
| 11  | Container capacity | 32.43 cu.ft       | 30.23 cu.ft | 34.83 cu.ft |
| 12  | Wages & salaries   | 135000 rs         | 108000 rs   | 108000 rs   |
| 13  | Wastage            | 3%                | 2%          | 2%          |
| 14  | Net profit         | 15%               | 10%         | 15%         |
| 15  | Power              | 20 hp             | 22 hp       | 20 hp       |
|     | requirement        |                   |             |             |

### Table 8- Ranking of an Industry By AHP method

|            | Industry Ranking |
|------------|------------------|
| Industry 3 | 0.928            |
| Industry 2 | 0.768            |
| Industry 1 | 0.471            |

Table 9- Ranking of an Industry by TOPSIS Method

| Industry 2 | 0.086 |
|------------|-------|
| Industry 3 | 0.21  |
| Industry 1 | 0.10  |

Table:-10 Ranking of Industry by PROMETHREE Method

| Industry2 | 0.731 |
|-----------|-------|
| Industry3 | 0.721 |
| Industry1 | -0.98 |

### **RESULT AND CONCLUSION**

[1] From these three result of ranking table in calculation we can say that ...

Industry2 > Industry 3 > Industry1 and CR of Industry 2 is more close to 1 than other two Industries, therefore Industry 2 is best.

- [2] By using one of the MADM method like AHP and PROMETHREE, we can find out best optimal solution by comparing the values of each of industry.
- [3] With this analysis we can find out which MADM is more effective for different set of problem. So here, two techniques such as AHP and PROMETHREE are more effective than TOPSIS.
